a
Change of decision object
Spatial prioritization
– decision: which units
– one planning moment
– output: ranked list
WHERE
Spatio-temporal scheduling
– decision: unit and year y_i
– annual capacity K couples years
– output: annual schedule
WHERE + WHEN
capacity forces delay
u
v
Year 1
Year 2
Year 3
Year 4
taken
free
$K = 3$ slots / year
u fills year 2
→ v waits until year 3
b
Where planning and implementation information enters
Listing
Conformity review
Approval window
Construction
Delivery
Scheduling
gate $a_{i,t}$
factor $a_{i,y}$
hazard $h_{i,j}$
b_i years
value at t_c
Planning support $P_{i,t}$
admission probability
$B_{i,t}$, $C_{i,t}$
obsolescence, readiness
$I_{i,t}$
infrastructure at t_c
Rules under K
– greedy ranking
– rolling horizon
current, announced, or full forecast
– learned policy
Expected value $EV_{i,y}$ of initiating unit i in year y
the rules differ in how they forecast this table
Annual schedule
